

# Risk management – reality checklist

## 1. Get together

Make sure that everyone is involved from the start. Bosses and workers need to be part of risk management, otherwise it just doesn't work.

## 2. Be aware

Everyone should understand what they are responsible for and what their rights are.

## 3. Think about the real world

You can't get rid of all risk entirely, so don't try. Solutions should be sensible, cost-effective, proportionate and based on good practice. And they shouldn't bring miles of red tape.

## 4. Take a positive approach

Good health and safety advice helps achieve results, and doesn't have to stop people from doing things. It helps us all do what we want without hurting anyone.

**We want to save life... not stop it!**
