Dear Mr Clinton

Re: Driving for work – In vehicle technology

Thank you for the opportunity to contribute comments on the RoSPA draft guidance note on In Vehicle Technology.

We agree that the understanding, selection and use of technological devices designed to help drivers is an increasingly important aspect of the management of work-related road risk. This draft guidance note covers all the main systems currently available and gives accurate descriptions of how they can be managed safely. The section that provides guidance for employers is clear and to the point and the sample policy is a useful way of setting out both employer and employee responsibilities.

We feel this document will make a useful and informative addition to the current advice on 'driving for work' provided by RoSPA.

Yours sincerely
